

# KD intra-articular Gel®

The holistic option of choice

KD intra-articular Gel® is a superior viscoelastic sterilized solution based on biofermented sodium hyaluronate for intra-articular supplementation and replacement of the synovial fluid in several joints.

- Impressive pain relief and improvement in joint function
- For all synovial joints
- Delays the cartilage degeneration process
- High hyaluronic acid concentration
- High molecular weight
- Optimum viscoelastic properties

Specification - KD intra-articular Gel®	2.2%	Ultra One 2.5%
Sodium hyaluronate	44 mg	120 mg
Molecular weight* (mDa)	1.7	2.2
Viscosity* (mPas)	300,000	500,000
Volume(ml)	2	4.8

\*mean value after steam sterilization

**HIGH  
CONCENTRATION**

**HIGH  
MOLECULAR  
WEIGHT**

**SUPERIOR  
VISCO-ELASTIC  
PROPERTIES**

To ensure optimal restoration of biomechanical and biological properties of synovial fluid in the knee joint

KD intra-articular Gel® combines three of the most essential elements in effective visco-supplementation – **High concentration, High molecular weight and Superior viscoelastic properties**
